

**John Uri Lloyd Papers, 1849-1936**  
Collection No. 1

Abstract

John Uri Lloyd was a renowned pharmacist, scientist, manufacturer and novelist. The materials in regard to the historical side of the man consist of diaries, autobiographical works, family papers and genealogical material, scrapbooks and correspondence. His scientific accomplishments are represented through laboratory notebooks, patents, research files and business records. His literary efforts are documented through original manuscripts of his works, both fiction and scientific. Included are original experiments, both records and material, and a complete collection of Lloyd's publications.

Biographical Sketch

John Uri Lloyd was a pharmacist, scientist, manufacturer and novelist. His most important contributions were in the field of pharmacy and pharmacognosy. He was in large part responsible for the development and acceptance of an American materia medica. Allied in the 1870s with the eclectic school of medicine, he was none the less accepted by all the medical schools, due to his unquestioned scientific approach to the research of medicinal plants. John Uri Lloyd was a supporter of standardization of regulations of the pharmaceutical manufacturing field, and was a major player in the enactment of the first Pure Food & Drug Act. His original research and writings in the field of alkaloids earned him the title of "father of colloidal chemistry." He wrote eight scientific books and six treatises, and taught chemistry at the Eclectic Medical College and the Cincinnati College of Pharmacy. Lloyd won the Ebert Prize, the premier award for pharmaceutical research, three times, and the Remington Medal, pharmacy's highest award, in 1920.

Lloyd began work as a pharmacist with H.M. Merrell & Co. an eclectic drug manufacturing concern, and eventually, with brother Nelson Ashley, gained ownership of the company under the name Lloyd Brothers Pharmacists. In the course of his manufacturing efforts, Lloyd patented many devices, including the Lloyd Extractor, a medicine bottle, medicine dropper, and over 20 others. Lloyd Brothers

eventually developed 379 "specific medicines" and was a major supplier to physicians of all types throughout the U.S.

Lloyd in his spare time was also a novelist. His first work of fiction, Etidorpha, was of the Jules Verne genre, a semi-science fiction work incorporating philosophical concepts wedded to unorthodox theories of science. The other major novels of Lloyd were with one exception based upon his experiences growing up in Northern Kentucky. His novels are more valuable as historical sketches of the region than as literary efforts, but are still entertaining.

### Scope and Content

The materials document the life of John Uri Lloyd through detailed family papers, including reminiscences of Lloyd spanning his childhood through work with the federal government on war taxes to trips to the Middle East and Japan. These are supported by reminiscences of his mother and other relatives, genealogical materials, and biographical sketches.

The scientific work is represented by original manuscripts of scholarly publications, research and experiment notes, patents, and publications covering the years from 1867 to 1936. Business records detail his success in the financial realm, from his early relationship with the Gordon pharmacy to the liquidation of Lloyd Bros., Inc.

The literary efforts are encompassed by a breadth of original manuscripts, often several drafts and sketches of each work, plus information on editing and publication. The correspondence, from his childhood to his death, provide insights on the man, and on the major issues in the areas of pharmacy, medicine, and politics of his day.
